# Commissioning of a new production plant for underlay boards

Assyx started producing a new type of high quality underlay board, with laminated wood core and polyurethane covering for the concrete block industry, at the beginning of June in Andernach.

3- 6 containers of laminated cores are delivered every week to the new Assyx production plant.

Shown in the foreground are the stacked laminated cores at the beginning of the rotating production line. In the background are the automatically stacked, finished Duroboards.

Assyx which was only founded in December 2005 has the aim of producing a new type of underlay board for the concrete block industry. The planning, construction on a Greenfield site in Andernach and commissioning of the production equipment which is now in operation, took only 6 months.

A two year development and test phase was carried out with production at cooperation partner Bayer AG, Leverkusen and a trial use of the underlay boards was made at several concrete plant, before the fast construction phase was started.

Up to 250.000 plantation wood laminated cores per year will pass through the new plant from now on, This plant is fitted with state of the art robot technology, which is specially designed for covering the laminated wood with wear resistant Polyurethane Baydur® from Bayer AG using a plastification process.

At the moment the first offers orders are being dispatched, and the official plant opening is forecast for late autumn 2006.

## Specialists in tailor-made solutions

- △ **Vibrating tables** – For compacting concrete elements, from test cube size to large pipes etc. Available as a stand-alone solution or part of a complete system.
- ◁ **External vibrators**  
 From separate vibrators to radio-controlled system solutions for girder formworks etc.

- △ **Block-moulding machines**
  - Floor-level block-making machines
  - Moulds

- △ **Special machines** such as:
  - Stressing wire cutting machines
  - Vibrating presses
  - Internal compaction machines for long-bed production
  - Concrete discharge and batching by vibration
  - Production machines for special concrete elements
