# Production board with laminated core and plastic sheathing in demand worldwide for 10 years

Assyx is exhibiting at the bauma in Munich for the fourth time in a row and will present its Assyx DuroBoard® production board. In addition, the company founded in 2006 is celebrating its tenth anniversary.

Assyx booth at the bauma 2007

The Assyx DuroBoard® has been in demand worldwide for 10 years

The moods at the bauma in the years 2007, 2010 and 2013 also reflect the development of the Assyx Company very well. In 2007 the industry was in a good mood and Assyx was able to get off to a great start as a company.

At the bauma 2010 the worst phase of the worldwide finance crisis was already past; however, it hit the worldwide construction industry hard and some markets still haven't recovered even today. As a still quite young company Assyx certainly had to deal with the effects of the crisis, but made the right decisions for successful further development and emerged stronger from the crisis.

The bauma 2013 then showed a consolidated industry and it was clear that Assyx had found its place there.

Now, in 2016, Assyx is presenting itself as an established company and one of the world's leading suppliers of high-quality production boards for the concrete block industry. With its state-of-the-art manufacturing technology, Assyx is one of the industry's trendsetters.

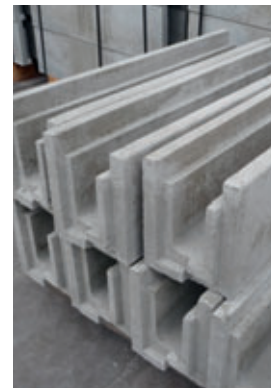

Innovative force, entrepreneurial courage, good decision making and continual, consistent development work lie behind this success story.

"The best is only just good enough. Assyx uses only high-quality materials and we procure them exclusively", says managing director Alfred Rochlus, describing the corporate philosophy. He has also been a joint-partner in Assyx GmbH & Co. KG since May 2015. "Our fully automatic manufacturing plant is probably unique in the world. Assyx is managed by engineers, who on the one hand understand their own manufacturing technology and on the other are also experts with regard to the handling of production boards in concrete block manufacturing."
